

How to Read Your Professional Diagnosis

The portal analyzes your resume and generates a complete diagnosis. This guide explains how to interpret each indicator.

What is an ATS (Applicant Tracking System)?

ATS are automated systems that filter resumes before they reach a human recruiter. Most mid-sized and large companies use them. A resume can represent a valuable career and still not pass this filter if it is not well structured. Several dimensions in the diagnosis directly measure your compatibility with these systems.

1. The Three Main Indicators

Indicator	What it measures and how to interpret it
Employability Score	Overall comprehensive score of the resume. Considers ATS compatibility, narrative impact (achievements vs tasks), professional clarity and document quality. Optimal range: 76–100.
Potential Score	Level achievable if you implement the recommendations. The gap between this and the Employability Score is your concrete improvement opportunity.
Impact Density	Proportion of quantifiable achievements vs described tasks. Low (0–40): describes tasks. Medium (41–70): balance. High (71–100): communicates real impact.

2. Professional Radar and Diagnostic Dimensions

The Professional Radar visually shows the six diagnostic dimensions. The shorter the axis, the greater the impact of improving it. Each dimension also feeds into the Employability Score.

Dimension	What it evaluates
Sector Keywords	Keywords from the professional area. Their presence improves ATS compatibility.
Action Verbs	Use of verbs that communicate impact: led, implemented, optimized.
Metrics & Results	Achievements with concrete data, numbers and measurable outcomes.
Document Structure	Organization, sections and visual clarity. Critical for ATS systems.
Skills Density	Quantity and relevance of declared skills.
Role Clarity	Coherence and readability of titles and career trajectory.

3. Achievement, Task and Responsibility Analysis

Category	What it means
Strong achievements	Phrases with an impact verb and concrete result. They contribute to the Employability Score.
Weak achievements	Attempt to communicate results but lack precision or metrics. The diagnosis suggests how to strengthen them.
Responsibilities without impact	Describe tasks without results. These are the greatest improvement opportunity.

4. Action Verbs and Weak Verbs

Action verbs: led, implemented, optimized, developed, coordinated, reduced. They strengthen ATS compatibility and narrative impact.

Weak verbs: responsible for, in charge of, collaborated, participated. The diagnosis shows the exact context and suggests alternatives.

5. Professional Narrative

Type	How a recruiter perceives it
Consistent	Clear and coherent trajectory. Easy to position.
Growing	Progression in responsibilities is visible. Positive signal.
In transition	Change of area or function. Requires a narrative that explains the direction.
Scattered	Varied roles without a common thread. Makes positioning difficult.

6. Skills Map

Declared: explicitly mentioned in the resume.

Detected in text: inferred from experience, even if not explicitly declared.

To incorporate: implicit skills worth mentioning directly.

7. Recommendations and Projection

Recommendations are ordered by priority (High / Medium / Low) and include what to do, how to do it and the estimated impact on the Employability Score. Always start with High priority ones.

Key tip: Analyze your resume again after implementing the improvements to verify the real impact on the score.

Glossary

Term	Definition
ATS	Applicant Tracking System. Software that automatically filters resumes before human review.
Employability Score	Comprehensive resume score: ATS compatibility, narrative, clarity and structure.
Impact Density	Proportion of quantifiable achievements over total professional descriptions.
Sector Keywords	Key words from the professional area present in the resume.
Seniority	Experience level: Junior / Semi-Senior / Senior / Lead / Executive.
Action Verb	Verb that communicates action and impact: led, implemented, optimized.

Important: This diagnosis analyzes how your resume is written, not your professional value. The goal is to help you understand how that document is performing today and where it could improve.
